Specification

The entire system is mounted within the hatch. The system has a number of modular detectors available and should be purchased with the cutting torch detector where there is a risk of cutting torch attacks. The liquid level detector is optional.

This system has the ability to detect the opening of a hatch and physical attacks to a hatch including drilling and cutting attacks.

Alarms are sent to a mobile phone using GSM and can also be sent to an alarm monitoring station via hard-wired transmission systems.

Product is compatible with First Alert Bureau site management software and comes with false alarm management software and the system uses sequential confirmation.
