

Shred-on-Site

Shred-on-Site - Mobile destruction

Category: Secure Destruction - Service Providers

Description

ShredderNote: Not all Shred on Site vehicles are fitted with the equipment necessary to meet NPSA standards and customers should request that the Shred on Site vehicle be fitted with a MDX shredding system. The MDX shredding system cannot yet produce waste residue to NPSA standards. However, the system has been approved based on the practical advantage offered by an on-site mobile destruction service. It is recommended that customers check the suitability of the shred size before contracting.
